## Dimensions & Capacity

W.H. Reynolds modular bleacher systems are designed for installation based on the space available and the seating required. Our bleacher frames come in 3,4,5,10,15 and 20 tier design. They are available in various lengths and can be installed on elevated superstructures, as more seating is required.

This allows for construction of multi-tiered bleacher systems that make maximum use of the space available and are built to meet and exceed all Canadian Building Code requirements.

All steel framework and all the post supports are hot dipped galvanized after fabrication. Stairs and ramps can also be installed on your bleacher system to allow easy access for everyone. Custom seating can also be created for all stadiums with concrete superstructures.
