## INSTRUCTIONS: Installing Aluminum

### OPTION:

- The Anodized 2" x 10" seat boards may have been "End Capped" in factory and installed for you.
- The Mill Finished 2" x 10" foot boards and rear riser board may have been "End Capped" in factory and installed for you.
- The Mill Finished 1" x 6" row #2 , #3 and #4 riser boards may have been "End Capped" in factory and installed for you.

# #3

The order to install Aluminum is below:

You should use a 7 ft. straight edge to make sure the ends of all planks are aligned and the overhang should be equal.

1. Measure corner to ensure frames are square and perpendicular
2. Install Row #5 seat board. This plank acts as a "straight edge" it aligns the (2) frames and spaces properly
3. Install Row #1 seat board
4. Install Row #5 foot board
5. Install Row #4 seat board and Row #4 foot board
6. Install Row #3 seat board and Row #3 foot board
7. Install Row #2 seat board and Row #2 foot board

# #4

- (1) Mill Finished Riser Board to be installed under row #5.
- (3) Normal 1" x 6" Riser Board to be installed under row #4, #3 and #2 using the bolt clip assemblies (same as seats and footboards).

# #5

- Tighten the nuts to the carriage bolts with adequate torque. The bolt clip will start to deflect slightly (bend) when tightened properly.
- Please ensure to check hardware regularly to ensure nuts have not come loose

*Please refer to drawings attached for reference*
